

Sisyrinchium bellum
Blue Eyed Grass

Perennial

Sun

Moderate water

Origin: California

Blue Eyed Grass is not a grass but its foliage is blade like. The single sky blue flowers are found on stems above the foliage in the winter and spring. This is a good plant to tuck into open nooks in the border or in drifts in meadows with grasses and thymes. Combine with other plants to make potted rock gardens. Provide occasional watering and avoid moist sites to avoid invasive seeding. It can look a little poorly in the hot summer months.
