

Heuchera 'Opal'

Opal Coral Bell

Perennial

Sun or Part Shade for inland gardens

Water Regularly

Origin: California

This hybrid Coral Bell was developed at the Rancho Santa Ana Botanic Gardens from several Western species. It forms a lush clump two feet high and wide. It has clean white flowers with the hint of a pink in spring. Beautiful in a woodland setting, massed under trees, or as an edging or border plant. Remove brown flower stems by pulling on them firmly. They will grow best when given water weekly in summer.
