

## **Epilobium canum 'Catalina'**

California fuchsia

Perennial

Sun to part shade

Moderate water

Origin: California

An outstanding selection of California fuchsia. Upright to 3 ft. tall with nice silvery-gray foliage. Large brilliant orangey-red tubular flowers bloom in late summer through fall. It is a Hummingbird favorite as the flowering time matches the bird's migratory cycle and the flowers are perfect for them. Flowers best with occasional deep watering. This species from southern California is particularly drought tolerant. Cut back lightly after flowering in late fall. Best with surrounding plants to help support it.
